

Takes production incidents end-to-end.

Noisy alerts and tickets become structured investigations — hypotheses tested, root cause found across every domain, remediation under your guardrails. **A role, not a person:** always-on, estate-wide, no personal inbox.

- Detect
- Diagnose
- Remediate
- Verify

THE INCIDENT LIFECYCLE

01 Detect Group the noise Dedupe related alerts, tickets and requests into one investigation.	02 Investigate Test hypotheses Tested against logs, metrics, traces and prior incidents.	03 Diagnose Root cause Causal chain across every domain, with evidence and confidence.
04 Remediate Apply the fix Roll back, revert, scale or restart — under your guardrails.	05 Verify Confirm recovery Re-check the firing signals and hold a stability window.	06 Learn Update the model Folds into the service map, runbooks and knowledge.

GOVERNED AUTONOMY

Autonomy management Set how far the orchestrator may act alone — per service, action class and environment.	Execution guardrails Hard boundaries on what may run, where and when. Nothing runs outside the lines you draw.	Approvals & handoffs Consequential actions gate on a human; routine fixes hand off to your coding agents.
Continuous monitoring Estate-wide watch with pre-alert investigation before a page is raised.	AI-driven remediation Decisions become governed actions through the tools you already run.	Learning & auditability Every run logged, gated and attributed — and folded back into the model.

WORKS WITH YOUR STACK — 50+ INTEGRATIONS

OBSERVABILITY Datadog · Prometheus · Grafana · CloudWatch · Splunk	INCIDENT & ON-CALL PagerDuty · Opsgenie · incident.io	CLOUD & K8S AWS · Azure · GCP · OCI · Kubernetes
CODE & CI GitHub · GitLab · Terraform	COLLABORATION Slack · Teams · Jira	KNOWLEDGE Runbooks · Confluence · Notion

OUTCOMES

UP TO 70% Lower MTTR	UP TO 90% Less alert noise	DAILY OPS 2–3x Engineer productivity	PER RUN \$25 Per investigation vs ~4 human hours
