

— A RECIPE, NOT A PROMPT

Your best engineer's method, runnable by the whole team.

Skills are structured recipes — steps, tool calls, constraints and an output schema. Lumi routes each question through the right ones before a single tool fires. Browse the catalog, clone a skill, or write your own from an SOP.

— WHAT A SKILL IS MADE OF

01 Steps The order an expert would work in, written down once.	02 Tool calls Exactly which systems it may query, with which parameters.	03 Constraints What it must never do. The guardrail ships inside the skill.	04 Output schema A predictable shape other skills and workflows can consume.	05 Connectors The integrations it depends on, checked before routing.
--	--	---	--	---

— FOUR CHECKS BEFORE ANY TOOL FIRES

- **Relevance.** Does the question actually match what this skill says it is for?
- **Availability.** Is the system this skill depends on connected right now?
- **Skill state.** Enabled, drafted or deprecated — only live skills are routed.
- **Permission.** Your role decides what runs. Denied skills are dropped, not hidden.

— A SKILL DECLARES ITS OWN LIMITS

```
db-pool-diagnostics.skill          v2.3 · enabled

autonomy: discover
constraints:
  # never terminate a session
  - read_only: true
```

— EVERYTHING SKILLS GIVE YOU

- Built-in catalog of 32 skills across ten domains
- Persona filters — SRE, DBA, NOC, platform
- AI recommendations for gaps and drifting calibration
- Clone and customise without touching the original
- Versioning with calibration tracked per version
- A router you can test before anything runs
- Connectors declared per skill, routed around when down
- Guardrails enforced inside the skill itself
- Custom skills written straight from your SOPs

— AUTONOMY LIVES ON THE SKILL

- **discover.** Read only — investigates and reports, safe on any site.
- **manage.** Scoped change on tagged targets, approval where required.
- **automate.** Unattended, once its acceptance rate has earned it.

Turn your best runbook into a skill.

Start from a built-in skill, clone it, and make it match how your team actually works.
